

HEPA

AIR FILTRATION BUYER'S GUIDE

genuine hepa

Filters out the tiny particulate matter (PM) most common in wildfire smoke and doesn't create ozone, a harmful gas released by some types of air purifiers.

PM size

Make sure you choose a model that filters the smallest particulate matter (PM) possible. The best filtration units can remove PM 0.3 microns in size.

room size

Buy a unit that will effectively filter the room where you'll use it most often. If you're at home a lot this could be the living room or

maintenance

Some air filtration units have replaceable filters. Others have filters that can be washed or vacuumed and re-used. Consider what's best for you.

energy star

To save energy and money on your electricity bill, choose units with the U.S. Department of Energy's Energy Star rating.

use it well

Air filtration units only work effectively with all doors and windows closed. Check out our **Summer Smart** [HEPA Air Filtration](#) page for tips.
