

# CREATE HEALTHY INDOOR AIR

Protect yourself and loved ones from wildfire smoke

## "Tight" House

**Close windows and doors.** A "tight" or closed house is healthier than an open house during smoke events.

## HEPA Filter

A HEPA purifier will clean the **air of a contained space**. If you purchase a portable HEPA filter, make sure it matches the room size where you will use it and filters particles down to 0.3 microns.

## Air Conditioning

If using an air conditioner, set it to **recirculate air** instead of bringing in outdoor air. If possible, replace your central filter with one that has a MERV rating of at least 13.

## Cook Outdoors

During a smoke event, try to **avoid** preparing food that requires **cooking on an indoor stove**. Try the BBQ or microwave instead!

## DON'T:

## Burn

Do **NOT** burn tobacco, candles, or incense.

## Vacuum

Do **NOT** do housekeeping work like vacuuming.
