CREATE HEALTHY INDOOR AIR

Protect yourself and loved ones from wildfire smoke

"Tight" House
Close windows and doors. A "tight" or closed house is healthier than an open house during smoke events.

HEPA Filter
A HEPA purifier will clean the air of a contained space. If you purchase a portable HEPA filter, make sure it matches the room size where you will use it and filters particles down to 0.3 microns.

Air Conditioning
If using an air conditioner, set it to recirculate air instead of bringing in outdoor air. If possible, replace your central filter with one that has a MERV rating of at least 13.

Cook Outdoors
During a smoke event, try to avoid preparing food that requires cooking on an indoor stove. Try the BBQ or microwave instead!

DON'T:

Burn
Do NOT burn tobacco, candles, or incense.

Vacuum
Do NOT do housekeeping work like vacuuming.
